# **Special Notes**

- starting from v1.1, the vsm dependencies are maintained on vsm-dependencies repository for tracking and trouble shooting.
- starting from v1.1, an automatic deployment tool is provided to deploy whole vsm controller and agents from one placement.

### **New Features**

- VSM-156 add sanity check tool to help identify potential issues before or after deployment
- VSM-159 add issue reporting tool
- VSM-184 add automated script to help deploy VSM on multiple nodes
- VSM-242 Allow user to modify ceph.conf outside VSM

# Resolved bugs

- VSM-4 Average Response Time" missing in dashboard Overview panel "VSM Status" section.
- VSM-15 VSM-backup prompt info not correct
- VSM-25 VSM Dashboard | Capacity of hard drives is wrong and percentage used capacity is not correct.
- VSM-26 [CDEK-1664] VSM | Not possible to replace node if ceph contain only 3 nodes.
- VSM-29 vsm-agent process causes high i/o on os disk
- VSM-33 negative update time in RBD list
- VSM-51 Install Fails for VSM 0.8.0 Engineering Build Release
- VSM-113 [CDEK-1835] VSM | /var/log/httpd/error\_log constantly ongoing messages [error] <Response [200]>
- VSM-121 Storage node unable to connect to controller although network is OK and all setting correct
- VSM-123 Storage node will not be able to contact controller node to install if http proxy set
- VSM-124 [CDEK-1852] VSM | adding possibility to manipulate ceph values in cluster.manifest file
- VSM-166 clustermanifest sanity check program gives incorrect advice for authkeys
- VSM-168 [CDEK1800] VSM CLI | remove mds doesn't update vsm database
- VSM-171 [CDEK1672] VSM\_CLI | list shows Admin network in Public IP section
- VSM-176 SSL certificate password is stored in a plain text file
- VSM-177 wrong /etc/fstab entry for osd device mount point
- VSM-179 keep ceph.conf up to date when executing "remove server" operations.
- VSM-193 hard-coded cluster id
- VSM-207 can't assume eth0 device name
- VSM-216 Add storage group requires at least 3 nodes
- VSM-217 Problem with replication size on "pool" created on newly added storage group.
- VSM-224 Controller node error in /var/log/httpd/error log constantly ongoing messages [error] <Response [200]</li>
- VSM-230 when presenting pool to openstack, cache tiering pools should be listed.
- VSM-233 console blocks when running automatic installation procedure
- VSM-236 no way to check manifest correctness after editing them
- VSM-239 with automatic deployment, the execution is blocked at asking if start mysql service
- VSM-244 Internal server error when installing v1.1

## **Known issues**

1.0

#### Charial Nata

Special Notes

For installation, please check the INSTALL.md on current release branch instead of the one on master branch.

Openstack Icehouse support

#### Fixed bugs

```
VSM-187 GUI shows always replication 3 when replicated pool is other than "Same as Primary"
VSM-183 ct_target_max_mem_mb and ct_target_max_capacity_gb sets the same value in create cache tier
VSM-182 add osd_heartbeat_grace and osd_heartbeat_interval to cluster.manifest
VSM-173 Can select same storage group in create replicated pool -- which should not
```

#### Known issues

```
VSM-191 VSM does not display the replica storage group.
VSM-192 force nonempty.
VSM-188 Missing column in manage pool page.
```

### 0.9.1

#### New Features

```
Support Split storage group
Support cache tier
Support Pool quota
```

#### Fixed bugs

```
VSM-112 [CDEK-1832] VSM | Cannot create a cluster - too many osds added
VSM-114 [CDEK-1836] VSM Dashboard | button create cluster is disappearing - nodes are in status -"available"
VSM-120 [CDEK-1840] VSM spams Monitors with health/pg/osd/mds dump
VSM-148 After I mark the default section title in server.manifest, server_manifest will report error
VSM-150 can't access vsm controller web by following installation instructions
VSM-152when created user successfully,I got the message "Created storage pool username successfully"
VSM-122Server_manifest doesn't support IPV6
VSM-3 VSM will create dup pools if present pool to openstack takes too long
VSM-108vsm-api.log has two ERROR messages which may be a bug
VSM-151 when creating user,I get the message"please input an invaild user name" .but I do not know the standar to determine whethe
VSM-49 CDEK-1825-SM | Cannot start httpd in vsm-controller -r controller
VSM-110 VSM 0.8.0 and 0.7.1 Install Fails from Open Source Code and Install Instructons
```

#### 0.8.0

#### New Features

```
Dashboard support https now. (Need one more dependence: mod_ssl-2.2.15-31.el6.centos.x86_64.rpm, newly added in rpms_list.txt)
Support erasure coded pool with ec-profile command line tool
Partially support cache tier
```

#### Fixed bugs

```
VSM-22: Present pool will make Openstack Icehouse error in display volumes
VSM-33: negative update time in RBD list
VSM-6: when presenting pool to openstack, maybe we need to not say success, when it's not true success
```

#### Known issues

```
VSM-110: VSM 0.8.0 and 0.7.1 Install Fails from Open Source Code and Install Instructons
```

## 0.7.1

1. make VSM as open source project
